exe virus called Win32/Sasser. A removable virus that is downloaded and executed when the game is running. In the event that you are infected, you will find that your browser or computer will become slow. You can remove Win32/Sasser by ordering the Win32/Sasser Removal Tool on the VirusTotal website. Please see this article to find out how. The present invention relates to an internal combustion engine, such as an automobile engine, and more particularly to a cylinder liner constituting an engine cylinder. In the field of conventional engines, an engine cylinder has been improved in output, or power, by making the volume of a combustion chamber larger by increasing the diameter of a cylinder liner or a piston, while at the same time, by making a combustion chamber cross-sectional area larger in proportion to the increased volume of the combustion chamber, to thereby increase the cylinder volume and output of the engine. The above technique, however, has had a problem in that the weight of the cylinder increases due to the increased cylinder diameter or a larger diameter of the piston, which leads to an increase in the weight of the engine. Recently, there has been proposed a technique to form a hole in the center of the combustion chamber, without increasing the size of the combustion chamber, to provide a larger volume in the combustion chamber and thereby to reduce the weight of the engine. Such an engine is disclosed in Japanese Patent Application Laid-open No. 7-203184, for example. In such an engine, a hole is provided in the center of the combustion chamber, as shown in FIGS. 4(a) and 4(b). A hole 11 is provided in a bottom of a piston 10 at a central position of the piston 10, and a notch 12 is provided in an outer periphery of the piston 10. A combustion chamber 13, shown in FIG. 4(a), is formed between the piston 10 and a cylinder liner 14. A flame of the combustion chamber 13 is closed by the notch 12 formed in the piston 10. The combustion chamber 13 is formed larger than the area of the notch 12. The thusly formed combustion chamber 13 is divided into three areas, namely, a pre-mixing area, a primary combustion area, and a post-mixing area, by the notch 12. Therefore, in comparison to an ordinary cylinder, the volume of the combustion chamber 13 is increased threefold. In the pre-mixing area, the air is introduced into the combustion chamber 13 82157476af
